

“Where will our knowledge take you?”

Mobile App Development

At BMT, we understand the importance of quick, secure and centrally sourced access to information. With availability and agility at the core of our app development, our bespoke mobile and tablet systems enable efficient capture and update of crucial information in real time and in any location.

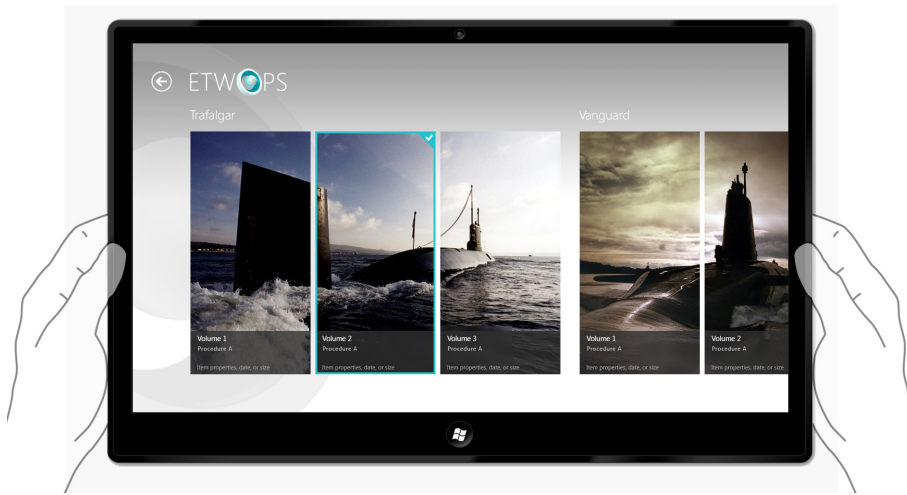

BMT have a team of experts who will work alongside your project stakeholders to provide mobile and tablet-based software solutions that meet your organisation's requirements.

With over 20 years' experience providing software to the UK Ministry of Defence, other government departments and industry, our systems promote efficiency for your personnel through simple and intuitive apps. We provide systems, which can be used on the move and on a variety of devices including iOS (iPad/iPhone), Android and Windows Mobile devices.

Key Benefits

- Total accessibility to your information, whenever and wherever you need it.
- Captured information is automatically accessible to other users via a single system, reducing the effort, cost, time and error of data capture.
- Our mobile apps can enhance existing systems in use within your business.
- Simple and intuitive user interfaces that require little or no training to use.
- We support multiple device types including iOS (iPad/iPhone), Android and Windows Mobile devices.
- Our apps have been deployed on ruggedised devices and are in use within potentially volatile and sensitive environments, such as weapons compartments and fuel depots.
- Automatic prompting and display of useful information based on location to enable effective, informed and timely decisions.
- Our systems offer real-time understanding of potential changes, such as equipment replacement, through Augmented Reality (AR).

User-friendly Interfaces

The user interfaces for all mobile and tablet apps are developed to be intuitive and user-friendly. This ensures quick and easy acceptance by prospective user base, allowing users to operate the app effectively with little or no training.

Enterprise on the Move

Our mobile solutions can be integrated and synchronised with office-based enterprise systems and databases. This provides end-to-end business solutions with up-to-date information that is accessible across your entire business.

Rugged by Design

Our experience in app development includes deployment to ruggedised and ATEX-compliant hardware devices to enable them to be used in potentially volatile atmospheric conditions including fuel and gas depots and weapons compartments on Royal Navy submarines.

BMT has developed a number of mobile and tablet apps to conduct activities such as:

- Fire safety and escape and evacuation surveys on-board naval vessels.
- Safety audits at fuel and gas sites.
- Recording and analysing atmospheric conditions on-board Royal Navy submarines.
- Carrying out weapon operating procedures on Royal Navy submarines.
- Capturing and automatically downloading GPS-tagged information regarding historical activities that have been carried out in the user's geographic area.
